Amendments to the Claims

Please cancel Claims 26 and 27. Please amend Claims 1, 7,13, 19, and 25. The Claim Listing below will replace all prior versions of the claims in the application:

Claim Listing

1. (Currently amended) A method for displaying dynamic page content in a page-caching browser capable of loading content for display from a cache, the method comprising:

specifying an address to ~~stored~~ content stored at a source;

~~appending~~ at a browser application, inserting a unique identifier [[to]] into the address, the ~~appended~~ unique identifier being unique for each request of the content, the unique identifier preventing the browser from loading the content from a cache; and

from the browser application, transmitting a content request with the address and the ~~appended~~ unique identifier to retrieve the stored content from the source regardless of whether the browser is configured to load content from the cache.

2. (Original) The method of claim 1, wherein the address includes a Universal Resource Locator (URL) to content of at least a portion of a web page.

3. (Original) The method of claim 2, wherein the address includes a query string, the unique identifier appended to the address in the query string.

4. (Original) The method of claim 1, wherein the unique identifier is a random number.

5. (Original) The method of claim 1, wherein the unique identifier is a time stamp.

6. (Original) The method of claim 1, where the unique identifier is an alpha-numeric representation.

7. (Currently amended) A system for displaying dynamic page content in a page-caching browser, comprising:

a client capable of loading content for display from a cache;

the client specifying an address to ~~stored~~ content stored at a source;

the client ~~appending~~ inserting a unique identifier [[to]] into the address, the ~~appended~~ unique identifier being unique for each request of the content, the unique identifier preventing the client from loading the content from the cache; and

the client transmitting a content request with the address and the ~~appended~~ unique identifier to retrieve the stored content from the source regardless of whether the browser is configured to load content from the cache.

8. (Original) The system of claim 7, wherein the address includes a Universal Resource Locator (URL) to content of at least a portion of a web page.

9. (Original) The system of claim 8, wherein the address includes a query string, the unique identifier appended to the address in the query string.

10. (Original) The system of claim 7, wherein the unique identifier is a random number.

11. (Original) The system of claim 7, wherein the unique identifier is a time stamp.

12. (Original) The system of claim 7, wherein the unique identifier is an alpha-numeric representation.

13. (Currently amended) An article of manufacture, comprising:

a computer-usable medium;

a set of computer operating instructions embodied on the medium, including instructions for a method of displaying dynamic page content in a page-caching browser capable of loading content for display from a cache, comprising instructions for:

specifying an address to ~~stored~~ content stored at a source;

~~appending~~ at a browser application, inserting a unique identifier [[to]] into the address, the ~~appended~~ unique identifier being unique for each request of the content, the unique identifier preventing the browser from loading the content from the cache; and

from the browser application, transmitting a content request with the address and the ~~appended~~ unique identifier to retrieve the stored content from the source regardless of whether the browser is configured to load content from the cache.

14. (Original) The article of claim 13, wherein the instructions define the address to include a Universal Resource Locator (URL) to content of at least a portion of a web page.

15. (Original) The article of claim 14, wherein the instructions define the address to include a query string, the unique identifier appended to the address in the query string.

16. (Original) The article of claim 13, wherein the instructions define the unique identifier to include a random number.

17. (Original) The article of claim 13, wherein the instructions define the unique identifier to include a time stamp.

18. (Original) The article of claim 13, wherein the instructions define the unique identifier to include an alpha-numeric representation.

19. (Currently amended) A computer data signal embodied in a carrier wave from a browser application for displaying dynamic page content in a page-caching browser, the signal comprising:

an address to page content stored at a source, the addressed page content being storable in cache memory of a browser capable of loading content for display from the cache memory; and

a unique identifier ~~appended to~~ inserted into the address to force retrieval of the page content from the address at the source, the unique identifier preventing the browser from loading the content from the cache memory, the ~~appended~~ unique identifier being unique for each request of the page content.

20. (Original) The computer data signal of claim 19, wherein the address includes a Universal Resource Locator (URL) to content of at least a portion of a web page.

21. (Original) The computer data signal of claim 20, wherein the address includes a query string, the unique identifier appended to the address in the query string.

22. (Original) The computer data signal of claim 19, wherein the unique identifier includes a random number.

23. (Original) The computer data signal of claim 19, wherein the unique identifier includes a time stamp.

24. (Original) The computer data signal of claim 19, wherein the unique identifier includes an alpha-numeric representation.

25. (Currently amended) A system for displaying dynamic page content in a page-caching browser, comprising:

a client capable of loading content for display from a cache;

a server;

the client specifying an address to content stored on the server;

the client ~~appending~~ inserting a unique identifier [[to]] into the address, the ~~appended~~ unique identifier being unique for each request of the content, the unique identifier preventing the client from loading the content from the cache; and

the client transmitting a content request with the address and the ~~appended~~ unique identifier to the server regardless of whether the browser is configured to load content from the cache.

26. (Canceled)

27. (Canceled)
